

Grade Tracker: Collaboration Diagram

User Story: Course Search

Description: In this diagram, the interaction between the student and the system is showing in the user story of searching for a course in the system. This certain interaction would happen when a student is searching for a course, the search gets processed and checked with the database of classes, where then a list is returned of courses that match the title the student searched. After that, that list of matching courses is displayed to the student. After that the student will select the course they want, and then that choice is processed. That specific course is accessed, and its data is sent back and displayed to the student. The data this course displays to the student will include assignments, grades, and comments left by their teacher.
